Sage

Sage 200: supporting business growth

Start with **Sage 200 Standard** if you want a simple out-of-the box cloud-based solution, with all you need for a fast start, managing your financials, supply chain and inventory.

Go for **Sage 200 Professional** if your business demands more automation, some level of customisation and the ability to extend your solution both horizontally and vertically.

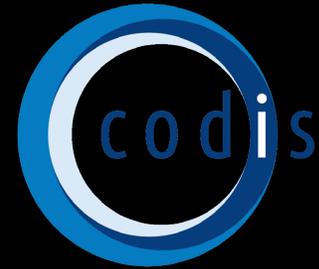

Take advantage of vertical-specific and complimentary solutions from ISVs including CRM integration, E-commerce and Automation. Explore our [marketplace](#) for a full overview of Sage 200 complimentary solutions.

Signs you may have outgrown your current system

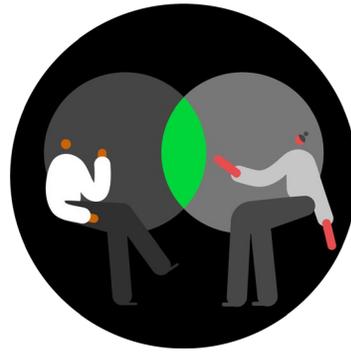

Inadequate visibility

“It’s difficult to make data driven decisions without a real-time view of financial performance.”

Manual processes

“Cumbersome workarounds have left our team over reliant in spreadsheet sand manual entry.”

Information silos

“Our team manually researches, re-enters, and verifies data that’s already captured elsewhere.”

Insufficient audit trail

“With multiple finding sources our monthly close and audit are complex and time consuming.”

Restricted growth

“As we’ve grown so has our QuickBooks file and it’s become time consuming to complete even basic tasks.”

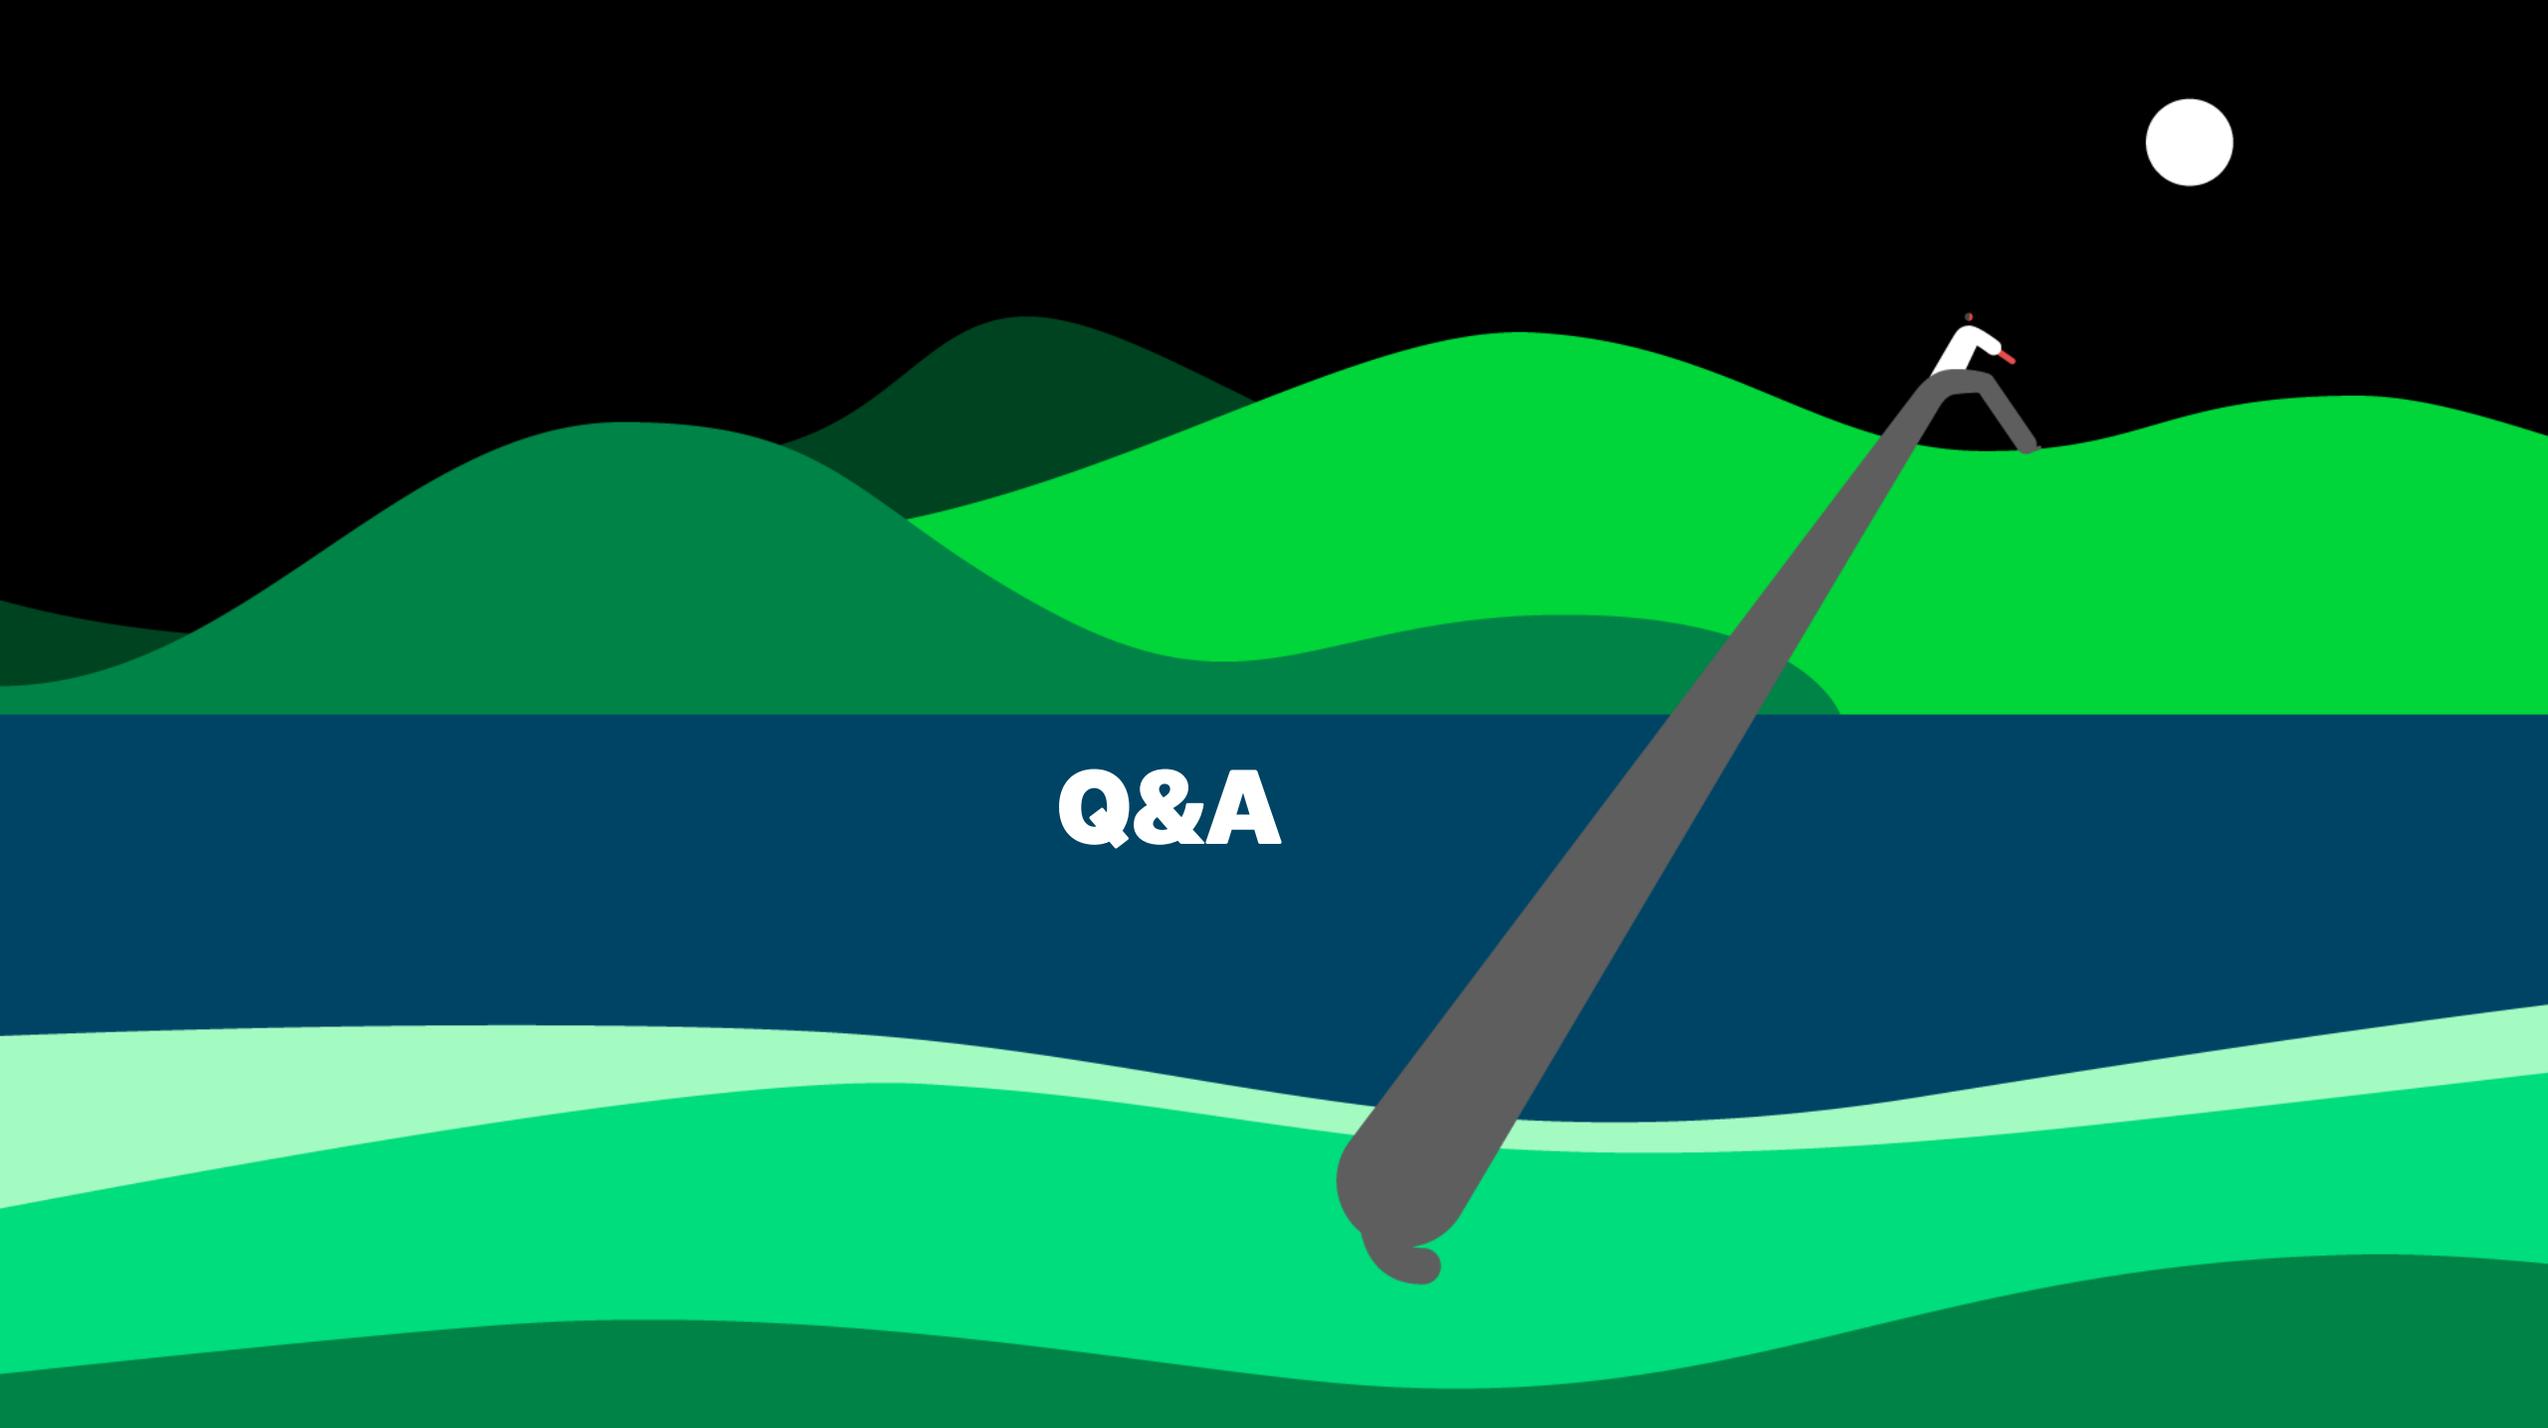

What are we going to see today?
